ZEMANTA

I've just come across a tool which is supposed to make blogging easier and more interesting. Zemanta is a plug in for Firefox which works with blogger and WordPress blogs. When you start to compose a post for your blog Zemanta takes note of what you are typing and makes suggestions of links or pictures that might tie in to what you are writing. For instance it has just turned up a series of links and pictures relating to Zemanta such as this and this. I'm not sure how useful it will be when I write on something less geeky, but I'll give it a go for a while and see whether it helps.
